SUPPLEMENTARY APPENDIX

Online Design and Methods

Mice
Timed matings were performed between Pik3r1+/− mice,1 and fetal liver cells from Day 14.5 WT and Pik3r1−/− embryos were cultured in Minimal Essential Media α, 20% fetal bovine serum (FBS, HyClone, Logan, UT, USA), 1% penicillin/streptomycin, and 100 ng/mL each G-CSF, SCF and TPO (Peprotech, Rocky Hill, NJ, USA), followed by retroviral transduction with WT Shp2 or Shp2 E76K, as described previously.2,3 All mice were maintained under specific pathogen-free conditions at the Indiana University Laboratory Animal Research Center (Indianapolis, IN, USA). This study was approved by the Institutional Animal Care and Use Committee of the Indiana University School of Medicine, USA.

PI3K assay and immunoblot analysis
As JMML is a disease of macrophage overproduction, biochemical studies were performed using murine fetal liver or bone marrow-derived macrophages, generated as previously described.3 Cells were serum- and growth factor-starved for 12-16 h followed by stimulation with 10 ng/mL GM-CSF. Total cellular protein extracts were prepared as previously described5 and assayed using Bradford Reagent and a standard curve. PI3K activity per 100 μg total cellular protein extract was assayed by measuring [32P] incorporation into lipid substrates separated by thin layer chromatography.5 For immunoblot analysis, blots were probed with anti-phospho-Akt (S473, 587F11 or T308, 244F9), anti-Akt, anti-phospho-Erk, anti-Erk, anti-p110α (C73F8) (Cell Signaling Technology), anti-p110β (S-19), anti-Shp2 (C-18) (Santa Cruz Biotechnology), anti-p110δ (BD Transduction Laboratories), or anti-p85α (AbD Serotec). Densitometry was performed using Image J (NIH, Bethesda, MD, USA).

Thymidine incorporation assay
Proliferation was measured by [3H]-thymidine incorporation assay performed on retrovirally transduced, sorted, EGFP+ fetal liver or bone marrow LDMNCs with indicated concentrations of murine GM-CSF, LY294002 (Calbiochem), GDC-0941 (Axon MedChem, Groningen, The Netherlands), IC87114 (Selleck Chemicals, Houston TX, USA), or tipifarnib (R115777, Selleck Chemicals), as previously described.5
