

Manuscript no. HAEMATOL2011/040659 entitled "Mesenchymal stromal cells protect mantle cell lymphoma cells from spontaneous and drug-induced apoptosis through secretion of b-cell activating factor and activation of the canonical and non-canonical nuclear factor κ B pathways"

Authors: Daniel J. Medina, Lauri Goodell, John Glod, Céline Gélinas, Arnold B. Rabson, and Roger K. Strair

Information about the contributions of each person named as having participated in the study

1) **Guarantor(s)**, i.e., person(s) who is (are) responsible for the integrity of the work as a whole:
• Daniel Medina, The Cancer Institute of New Jersey, University of Medicine and Dentistry of New Jersey-Robert Wood Johnson Medical School, New Brunswick, New Jersey
medinadj@umdnj.edu

According to the International Committee of Medical Journal Editors (ICMJE) (http://www.icmje.org/ethical_1author.html): "Authorship credit should be based on: 1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data; 2) drafting the article or revising it critically for important intellectual content; and 3) final approval of the version to be published. Authors should meet conditions 1, 2, and 3 Acquisition of funding, collection of data, or general supervision of the research group alone does not constitute authorship".

The guarantors of this manuscript confirm that all persons designated as authors qualify for authorship, and that each author has participated sufficiently in the work to take public responsibility for appropriate portions of the content.

2) Authors who participated in the **conception of the study**: Daniel Medina

3) **Design & Methods**. The following authors were responsible for specific investigations (please detail):

- Daniel J. Medina performed all of the experiments data acquisition and analysis
- Lauri Goodell obtained patient specimens, pathology review
- John Glod culture and characterization of mesenchymal stromal cells
- Céline Gélinas provided significant intellectual input on the design of the NF- κ B experiments and data analysis
- Arnold B. Rabson provided significant intellectual input on the design of the NF- κ B experiments and data analysis
- Roger K. Strair obtained patient samples and helped design some of the experiments

4) **Results**. The following authors were responsible for specific portions of the results, including figures and tables (please indicate the person responsible for each figure and each table):

- Daniel J. Medina was responsible for primary data collection, analysis, and composition of all figures. Verification of data analysis, figures and final approval was done by all co-authors.

5) **Writing the manuscript**. The following authors were responsible for writing the manuscript:

- Daniel J. Medina was responsible for writing the first draft of the manuscript, which was then corrected/amended by all co-authors and the final version approved by all co-authors.

6) **Contributors Listed in Acknowledgments**:

The authors reported no potential conflicts of interest. This work was supported by a grant from the New Jersey Commission on Science and Technology, The Century For The CURE, Guys Charity Golf Outing and Robert Wood Johnson Foundation for support of the Child Health Institute of New Jersey This research was also supported by the Laboratory Support Services, Tissue Analytic

Services and the Flow Cytometry Shared Resource(s) of The Cancer Institute of New Jersey (P30CA072720).
