Online Supplementary Figure S1. LMO2: case 1 (left), case 2 (center and right) 40x objective.

Online Supplementary Figure S2. LEF1: (A) in case 1, the lymphoma cells were weakly positive for LEF1 [(A) 40x objective]. The staining intensity was lower than that of reactive T cells. (B) LEF1: brown; CD20: red. 40x objective). The lymphoma cells in case 2 were negative for LEF1. [(B) 40x objective]. The cells of small lymphocytic lymphoma [(B) Positive control. 40x objective] were positive for LEF1, more intensely in proliferation center cells (upper right).
