Title	Autophagy in blood cancers: biological role and therapeutic implications
First author	Alessio Nencioni

According to the International Committee of Medical Journal Editors (ICMJE)

(http://www.icmje.org/ethical_1author.html):

“Authorship credit should be based on: 1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data; 2) drafting the article or revising it critically for important intellectual content; and 3) final approval of the version to be published. Authors should meet conditions 1, 2 and 3. Acquisition of funding, collection of data, or general supervision of the research group alone does not constitute authorship”.

The responsible author(s) of this manuscript confirm(s) that all persons designated as authors qualify for authorship, and that each author has participated sufficiently in the work to take public responsibility for appropriate portions of the content.

Specific contributions of each author are listed on page 2 of this document.

Responsible author(s):

author(s) responsible for the integrity of the work as a whole

Name: Alessio Nencioni
Institute: Department of Internal Medicine, University of Genoa, Genoa, Italy

Author contributions (maximum 1 page):

Please describe the contributions of each author, indicating who was responsible for each part of the study and the preparation of the manuscript (collection of data, experiments, data analysis, generation of figures, collection of images, interpretation of data, preparation of the text, etc.)

All the authors collaborated and decided together on the topics to be discussed in this article. A.N. drafted the manuscript and was responsible for Figure 2 and Figure 3. He was also responsible for Table 1 and 2. M.C. and F.M. contributed to the section on autophagy as a tumor suppressive mechanisms and on agents that activate autophagy. Valter D. Longo contributed to the section on autophagy as a means to fight the side effects of chemotherapy. A.M.C. and F.P contributed to the section on the rationales for inhibiting autophagy in blood cancer treatment. T.L.H and G.V.H. contributed to all of the sections of the article. G.V.H. was also responsible for Figure 1. The authors report no potential conflicts of interest.
