Increased reactive oxygen species production and p47phox phosphorylation in neutrophils from myeloproliferative disorders patients with JAK2 (V617F) mutation.

Margarita Hurtado-Nedelec

According to the International Committee of Medical Journal Editors (ICMJE) (http://www.icmje.org/ethical_1author.html):

“Authorship credit should be based on: 1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data; 2) drafting the article or revising it critically for important intellectual content; and 3) final approval of the version to be published. Authors should meet conditions 1, 2 and 3. Acquisition of funding, collection of data, or general supervision of the research group alone does not constitute authorship”.

The responsible author(s) of this manuscript confirm(s) that all persons designated as authors qualify for authorship, and that each author has participated sufficiently in the work to take public responsibility for appropriate portions of the content.

Specific contributions of each author are listed on page 2 of this document.

Responsible author(s):

author(s) responsible for the integrity of the work as a whole

Author contributions (maximum 1 page):

Please describe the contributions of each author, indicating who was responsible for each part of the study and the preparation of the manuscript (collection of data, experiments, data analysis, generation of figures, collection of images, interpretation of data, preparation of the text, etc.)

1-Margarita Hurtado-Nedelec: performed experiments, collected and analysed the data, generated the figures, wrote the paper, revised the manuscript critically for important intellectual content. And approved the final version to be published.

2-Marie-José Csillag-Grange: performed experiments, collected and analysed the data, generated the figures, wrote the paper, revised the manuscript critically for important intellectual content. And approved the final version to be published.

3-Tarek Boussetta: performed experiments, collected and analysed the data, generated the figures, revised the manuscript critically for important intellectual content and approved the final version to be published.

4-Sahra Amel Belambri: performed experiments, collected and analysed the data, generated the figures, revised the manuscript critically for important intellectual content and approved the final version to be published.

5-Michèle Fay: performed experiments, collected, analysed the data, revised the manuscript critically for important intellectual content and approved the final version to be published.

6-Bruno Cassinat: performed experiments, collected and analysed the data, wrote the paper, revised the manuscript critically for important intellectual content and approved the final version to be published.

7-Marie-Anne Gougerot-Pocidalo: helped to design the study, to interpret the results and to write the paper. Revised the manuscript critically for important intellectual content and approved the final version to be published.

8-Pham My-Chan Dang: helped to design the study, interpret the results and to write the paper. Revised the manuscript critically for important intellectual content and approved the final version to be published.

9-Jamel El-Benna: designed the study and interpreted the results and wrote the paper. Revised the manuscript critically for important intellectual content and approved the final version to be published.
