Title	RESVERATROL ACCELERATES ERYTHROID MATURATION BY ACTIVATION OF FOXO3 AND AMELIORATES ANEMIA IN BETA-THALASSEMIC MICE
First author	<i>Sara Santos Franco</i>

According to the International Committee of Medical Journal Editors (ICMJE) (http://www.icmje.org/ethical_1author.html):

“Authorship credit should be based on: 1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data; 2) drafting the article or revising it critically for important intellectual content; and 3) final approval of the version to be published. Authors should meet conditions 1, 2 and 3. Acquisition of funding, collection of data, or general supervision of the research group alone does not constitute authorship”.

The responsible author(s) of this manuscript confirm(s) that all persons designated as authors qualify for authorship, and that each author has participated sufficiently in the work to take public responsibility for appropriate portions of the content.

Specific contributions of each author are listed on page 2 of this document.

Responsible author(s):

author(s) responsible for the integrity of the work as a whole

Author contributions (maximum 1 page):

Please describe the contributions of each author, indicating who was responsible for each part of the study and the preparation of the manuscript (collection of data, experiments, data analysis, generation of figures, collection of images, interpretation of data, preparation of the text, etc.)

LDF, DAS, CB, AI and SG designed the experiments, analyzed the data and wrote the manuscript; SM, NM and XA contributed to study design and the writing of the manuscript; SSF performed the experiments and analyzed the data; AS and AM performed the experiments; PR performed the FOXO3a analysis on sorted cells, analyzed the data; MB performed the carbonyl groups measurements and FOXO3a- PRDX2 bioinformatic analysis and contributed to writing of the manuscript; LDeF performed the RT-PCR analysis and analyzed the data; JA carried out the pathological analysis. MDC supplied part of the beta-thalassemia intermedia samples, and contributed to writing the manuscript; EZ contributed to sorting experiments; all authors reviewed the manuscript
