Supplementary figure legends:

**Figure S1.** Proportions of PNH type populations. (A) Granulocytes; (B) Erythrocytes

**Figure S2.** ROC curves were constructed to evaluate the prognostic potential of the response to IST at 6 months. (A) PNH granulocytes; (B) PNH erythrocytes; (C) Telomere length.
Figure S1

A

B

Frequency of PNH populations

Cut off level = 0.005 %

Cut off level = 0.01 %
Figure S2

A

0.005%

PNH granulocytes
AUC = 0.62 (95% CI, 0.53–0.72)

B

0.010%

PNH erythrocytes
AUC = 0.62 (95% CI, 0.52–0.72)

C

-1.21 SD

Telomere Length
AUC = 0.70 (95% CI, 0.60–0.80)
