Repeated fecal microbiota transplantations attenuate diarrhea and lead to sustained changes in the fecal microbiota in acute, refractory gastrointestinal graft-versus-host-disease

Walter Spindelboeck, Eduard Schulz, Barbara Uhl, Karl Kashofer, Ariane Aigelsreiter, Wilma Zinke-Cerwenka, Adnan Mulabecirovic, Patrizia K Kump, Bettina Halwachs, Gregor Gorkiewicz, Heinz Sill, Hildegarde Greinix, Christoph Högenauer, and Peter Neumeister

Disclosures: none

Contributions: WS and PN wrote the manuscript. WS, PK and CH performed FMTs. PN, BU, AM, ES, WZC, HS and HG were involved in the clinical management of the patients including diagnostic and therapeutic procedures. AA and GG performed pathological exams. KK, BH and GG performed microbiota analyses and interpreted microbiome data. All authors provided critical input to the manuscript and endorsed its final version.
