Expression of COBLL1 encoding novel ROR1 binding partner is robust predictor of survival in chronic lymphocytic leukemia

Hana Pleingerová, Pavlína Janovská, Archana Mishra, Lucie Smyková, Lucie Poppová, Antonín Libra, Karla Plevová, Petra Ovesná, Lenka Radová, Michael Doubek, árka Pavlová, árka Pospílová, and Vítzslav Bryja

Disclosures: Supported by projects of the Czech Science Foundation (17-16680S, 17-09525S), Ministry of Health, Czech Republic (15-29793A and FNBr 65269705), by Masaryk University (MUNI/A/1106/2016, MUNI/A/0988/2016) and by projects of MEYS CR No. CEITEC 2020 (LQ1601). Also supported by the Czech Leukemia Study Group for Life (CELL). A. Mishra was financed by the programme SoMoPro, which is jointly supported by the European Union as part of the 7th Framework Programme (FP/2007-2013, Grant Agreement no. 229603) and the South Moravian Region. V. Bryja is supported by Neuron – Fund for Support of Science. We wish to thank Christian Arquint and Erich A. Nigg for providing pcDNA3.1-FLAG vector, Peter Konik (University of South Bohemia, Ceske Budejovice) for assisting with the mass spectrometry, Jana Kotaskova (University Hospital Brno) for processing survival and treatment data and Matthew Smith for language correction.

Contributions: HP and PJ designed the study, performed research and data analysis, wrote the manuscript AM, LS and AL performed research LP performed research and reviewed the manuscript KP and SPa reviewed the manuscript PO and LR performed statistical analysis MD provided patients' samples SPo supervised the study VB designed and supervised the study and wrote the manuscript
