Version 3

Low serum haptoglobin and blood films suggest intravascular
haemolysis contributes to severe anaemia in hereditary haemorrhagic
telangiectasia

Lieze Thielemans, D. Mark Layton, and Claire L. Shovlin

Disclosures: None

Contributions: Contributions: LT, supervised by CLS, generated the haptoglobin database, performed analyses on the haptoglobin cohort, and drafted the manuscript section. ML provided haematological advice and patient reviews. CLS devised the study, developed the haemolysis hypothesis and approach following clinic observations and discussions with one patient's sister, reviewed the patients, treated the asthma patient, generated the remaining databases, performed all statistical analyses, and wrote the full manuscript. All authors reviewed and approved the manuscript.
