Version 4

Molecular minimal residual disease negativity and decreased stem cell mobilization potential predict excellent outcome after autologous transplant in NPM1 mutant acute myeloid leukemia.

Alvaro De Santiago de Benito, Barbara Jeker, Eva Gfeller, Naomi Porret, Yara Banz, Urban Novak, Ulrike Bacher, and Thomas Pabst

Disclosures: The authors declare no conflict of interest.

Contributions: AS: performed research, analyzed data and wrote the paper; EG, NP, YB: contributed vital data; BJ, UN: contributed vital material; UB, TP: designed research, analyzed data and wrote the paper. All authors participated in drafting or reviewing the report and all authors approved the submitted version.
