Supplementary Table 1A. Hematological SAEs in pts with no (Ø) / with DR & impact on subsequent therapy continuation

	Entire cohort	Fit	Intermediate	Frail	<60 years	60-69 years	≥70 years
Pts Ø DR : with DR (%)	148 (59) : 102 (41)	59 (81) : 14 (19)	80 (55) : 65 (45)	9 (28) : 23 (72)	80 (79) : 21 (21)	43 (57) : 33 (43)	25 (34) : 48 (66)
SAEs in pts with Ø DR : with DR (per pt)	92 (0.6) : 65 (0.6)	15 (0.3) : 2 (0.1)	66 (0.8) : 39 (0.6)	11 (1.2) : 24 (1.0)	46 (0.6) : 8 (0.4)	23 (0.5) : 21 (0.6)	23 (0.9) : 36 (0.8)
Therapy adaptations* ¹ in pts after SAEs with Ø DR : with DR (%)	5 (5) : 8 (12)	0 (0) : 0 (0)	2 (3) : 5 (13)	3 (27) : 3 (13)	0 (0) : 1 (13)	2 (9) : 2 (10)	3 (13) : 5 (14)

Supplementary Table 1B. Non-hematological SAEs in pts with no (Ø) / with DR & impact on subsequent therapy continuation

	Entire cohort	Fit	Intermediate	Frail	<60 years	60-69 years	≥70 years
Pts Ø DR : with DR (%)	148 (59): 102 (41)	59 (81): 14 (19)	80 (55) : 65 (45)	9 (28) : 23 (72)	80 (79): 21 (21)	43 (57): 33 (43)	25 (34) : 48 (66)
SAEs in pts with Ø DR : with DR (per pt)	53 (0.4): 70 (0.7)	15 (0.3) : 2 (0.1)	33 (0.4) : 37 (0.6)	5 (0.6) : 31 (1.4)	29 (0.4) : 5 (0.2)	15 (0.4) : 29 (0.9)	9 (0.4) : 36 (0.8)
Therapy adaptations* ¹ in pts after SAEs with Ø DR : with DR (%)	14 (26) : 14 (20)	3 (20) : 0 (0)	8 (24) : 6 (16)	3 (60) : 8 (26)	5 (17) : 0 (0)	5 (33) : 4 (14)	4 (44) : 10 (28)

Abbreviations:

DR: Dose Reduction; SAE: Serious Adverse Event; pt.: patient; Ø: No;

*¹ Adaptations: DR, therapy pause or -discontinuation

Supplementary Table 2. Therapy-discontinuation in MM patients (n=8) during induction

Patients	Age (years)	R-MCI score	Initial DR: Yes/No	Reason for therapy discontinuation	Therapy cycle of discontinuation	Possible avoidance of therapy discontinuation and/or SAE diminution with better tailored therapy?	R-MCI helpful in tailored therapy decisions: Yes/No
1	67	3 = fit	Yes	Persisting neutropenia	4 th VCD cycle	No	No
2	58	3 = fit	No	Acute heart and renal failure (MM with concomitant AL-amyloidosis); unsuccessful in-hospital resuscitation	3 rd VCD cycle	Yes	Yes* ¹
3	62	5 = interm.	Yes	Acute respiratory insufficiency with opiate overdose; reduced general condition	1 st VCD cycle	Yes	Yes
4	78	7 = frail	Yes	Reduced general condition; multifactorial-induced reduced vigilance	1 st VCD cycle	Yes	Yes
5	77	7 = frail	Yes	Sepsis	4 th VCD cycle	Yes	Yes
6	84	7 = frail	Yes	Acute heart failure; infection	4 th RD cycle	Yes	Yes
7	77	8 = frail	Yes	Acute renal failure; MM progression	3 rd VCD cycle	Yes	Yes
8	63	8 = frail	Yes	Reduced vigilance; metabolic acidosis; transfer to intensive care unit	1 st VCD cycle	Yes	Yes
Σ Median (range)	Median:72 (58-84)	Median:7 (3-8)	7/8 = most with DR	Pt constitution-, MM and/or therapy-induced complications	Median:3 (1-4)	In 7/8 = most induction protocols were overdosed, suggesting this rather than underdosing the larger clinical challenge* ²	In 7/8 deemed helpful

Abbreviations:

MM: Multiple myeloma; R-MCI: Revised-Myeloma Comorbidity Index; interm.: intermediate-fit; DR: Dose Reduction; SAE: Serious Adverse Event; pt: patient; VCD: Bortezomib, Cyclophosphamide, Dexamethasone; Rd: Lenalidomide, Dexamethasone

*¹ R-MCI-score results in AL-amyloidosis vs. MM patients have proven to be similar, albeit amyloidosis patient constitution was generally more impaired, suggesting that via R-MCI-fitter deemed amyloidosis patients must be regarded much sicker and treated with utmost care as compared to MM patients; see details in Schoeller K, Ihorst G, Engelhardt M et al. Blood 2019; 134 (Supplement_1): 3474. doi: <https://doi.org/10.1182/blood-2019-127030>

*² Engelhardt M, Domm AS, Wäsch R et al. Haematologica. 2017 May;102(5):910-921

Supplementary Table 3. Number of patients who suffered ≥1 SAE CTC 3-5 divided in R-MCI groups

	Entire cohort	Fit	Intermediate	Frail	p-value
Patients	250	73	145	32	
≥1 hematological and/or non-hematological SAE (%)	120 (48)	18 (25)	80 (55)	22 (69)	<0.0001
≥1 hematological SAE (%)	101 (40)	14 (19)	67 (46)	20 (63)	<0.0001
Anemia (%)	76 (30)	9 (12)	50 (34)	17 (53)	<0.0001
Leukocytopenia (%)	56 (22)	5 (7)	42 (29)	9 (28)	0.0015
Thrombocytopenia (%)	25 (10)	3 (4)	13 (9)	9 (28)	0.0007
≥1 non-hematological SAE (%)	67 (27)	8 (11)	41 (28)	18 (56)	<0.0001
≥1 infectious SAE (%)	56 (22)	8 (11)	35 (24)	13 (41)	0.0006
≥1 renal SAE (%)	19 (8)	2 (3)	10 (7)	7 (22)	0.0020
≥1 pulmonary SAE (%)	15 (6)	2 (3)	9 (6)	4 (13)	0.0587
≥1 cardiac SAE (%)	12 (5)	2 (3)	5 (3)	5 (16)	0.0193
Leukocytopenia & ≥1 infectious SAE (%)	25 (10)	1 (1)	18 (12)	6 (19)	>0.05

Abbreviations:

R-MCI: Revised-Myeloma Comorbidity Index; SAE: Serious Adverse Event

Supplementary Table 4. First response after start of induction in R-MCI subgroups

R-MCI subgroups	CR	vgPR	PR	SD	PD	Sum
Fit pts (%)	1 (1%)	19 (26%)	33 (45%)	16 (22%)	4 (6%)	73
Intermediate-fit pts (%)	1 (1%)	32 (22%)	79 (54%)	26 (18%)	7 (5%)	145
Frail pts (%)	1 (3%)	8 (25%)	13 (40.5%)	6 (19%)	4 (12.5%)	32

Abbreviations:

R-MCI: Revised-Myeloma Comorbidity Index; CR: Complete Remission; vgPR: very good Partial Remission; PR: Partial Remission; SD: Stable Disease; PD: Progressive Disease; Sum: summary

Supplementary figure legends

Supplementary Figure 1. R-MCI with via multivariate analysis generated prognostic factors

Abbreviations: R-MCI: Revised-Myeloma Comorbidity Index; FEV 1: Forced expiratory volume in 1 second; KPS: Karnofsky Performance Status, TUG: Timed Up and Go; IADL: Instrumental Activities of Daily Living; eGFR: estimated Glomerular Filtration Rate;

*¹ Lung dysfunction: Mild: FEV1 <80%; moderate: FEV1 ≤60% or diffusion capacity ≤61%, severe: FEV1 <50%; mild: 0/1 parameter is correct; moderate: 2 parameters are correct; severe: >2 parameters are correct

*² Frailty^{8,17,23}: Karnofsky Index ≤70%; Time Up/Go >10 seconds; IADL ≤4 points; subjective fitness grade E or F

*³ Unfavorable: del17p13, t(4;14), t(14;16), t(14;20), chromosome 1 abnormalities, c-myc, del(13q14), hypodiploidy

Supplementary Figure 2. Consort flow diagram: study design

Abbreviations: MM: Multiple Myeloma; SAE: Serious Adverse Event; OS: Overall Survival; PFS: Progression Free Survival; R-MCI: Revised-Myeloma Comorbidity Index; y: years

Supplementary Figure 3. VCD vs. non-VCD distribution in entire cohort and in follow-up cohort with R-MCI changes from start of induction (T0) to 6-24 months after first R-MCI assessment (T1)

Abbreviations: VCD: Bortezomib, Cyclophosphamide, Dexamethasone; RAD: Lenalidomide, Adriamycin, Dexamethasone; VRd: Bortezomib, Lenalidomide, Dexamethasone; RD: Lenalidomide, Dexamethasone; IdaD: Idarubicin, Dexamethasone

*Others: Vd: Bortezomib, Dexamethasone; RCD: Lenalidomide, Cyclophosphamide, Dexamethasone; CD: Cyclophosphamide, Dexamethasone; TD: Thalidomide, Dexamethasone; MVP: Melphalan, Bortezomib, Prednisolone; VTD: Bortezomib, Thalidomide, Dexamethasone; Elo-VRd: Elotuzumab, Bortezomib, Lenalidomide, Dexamethasone

Lungdysfunction^{*1}:
(FEV 1/diffusion capacity)
No/mild: 0
Moderate/severe: 1

Renal function:
(eGFR ml/min/1.73m²)
≥60: 0
<60: 1

Karnofsky Performance Status:
100%: 0
80 or 90%: 2
≤70%: 3

R-MCI
(0-9 points)

0-3: Fit
4-6: Intermed.-fit
7-9: Frail

Cytogenetics:
Favorable: 0
Unfavorable^{*3}: 1
Missing: 0

Frailty^{*2}:
(KPS, TUG, IADL, subjective fitness)
No/mild: 0
Moderate/severe: 1

Age:
In years

<60: 0
60-69: 1
≥70: 2

Supplementary Figure 1

Induction therapy survey of 359 patients
(Prospective geriatric assessments university Freiburg & inclusion in MM-tumorboard)

Exclusion of 109
(50 without completed induction; 59 missing data)

250 patients (100%) for detailed analysis

Assessment of induction protocols, SAE, adaptations, response, OS / PFS

R-MCI subgroups: fit / intermediate-fit / frail

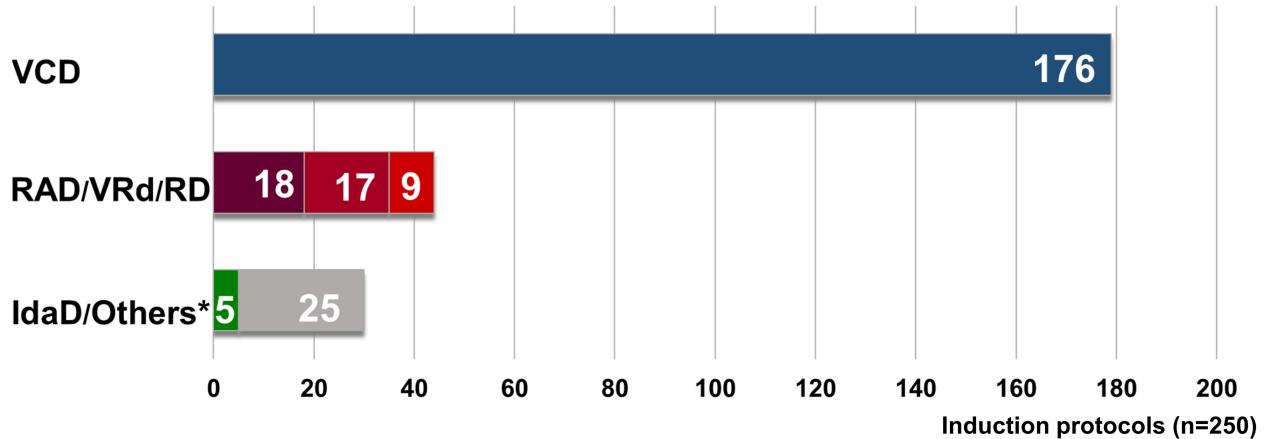

Age groups: < 60y / 60-69y / ≥ 70y

Exclusion of 70 patients
(28%: insufficient data for R-MCI follow-up)

**180 patients (72%) with follow-up
after 6-24 months**

Supplementary Figure 2

Entire cohort (250 patients)

Follow-up cohort (180 patients)

Treatment induction: VCD vs. non-VCD	Median / mean (range) R-MCI T0	Median / mean (range) R-MCI T1	Mean difference R-MCI T0→T1 (range)
VCD (n=127)	5 / 4.6 (0-9)	4 / 3.9 (0-8)	-0.7 (4↓ - 3↑)
Non-VCD (n=53)	3 / 3.5 (0-7)	3 / 3.2 (0-7)	-0.3 (2↓ - 3↑)
p-value	<0.0001	<0.0051	<0.0535

Supplementary Figure 3
