Abbreviations: AYAs, adolescents and young adults; T-LBL, T-lymphoblastic lymphoma; BL, Burkitt lymphoma; DLBCL, diffuse large B-cell lymphoma; ALCL, anaplastic large cell lymphoma; SE, standard error; CT, chemotherapy; RT, radiation therapy; SCT, stem cell transplantation; ICC-3, International Classification of Childhood Cancer, 3rd edition.

NA: Estimation of a reliable survival probability was not possible because of N at risk <10.

^a Expected probabilities of survival were estimated using the Ederer II method.

^b BL corresponds to ICC-3 diagnostic group IIc.

^c Survival estimates are not provided for the "Other/no treatment/unknown" treatment group because of the mixed set of patients and the risk of immortal time bias.

^d CT only, not treated with RT, rituximab or SCT.

^e Treated with CT and RT; not treated with rituximab or SCT.

^f Treated with CT and rituximab independent of RT; not treated with SCT (patients treated with rituximab, who did not receive CT, were also included in this category).

^g Treated with SCT independent of CT, RT or rituximab.

Abbreviations: AYAs, adolescents and young adults; HR, hazard ratio; CI, confidence interval; T-LBL, T-lymphoblastic lymphoma; BL, Burkitt lymphoma; DLBCL, diffuse large B-cell lymphoma; ALCL, anaplastic large cell lymphoma; CT, chemotherapy; RT, radiation therapy; SCT, stem cell transplantation; ICCC-3, International Classification of Childhood Cancer, 3rd edition.

^a Adjusted for follow-up time (years), period of diagnosis (1990-1999, 2000-2009, 2010-2015), sex (male, female), and Ann Arbor stage (I, II, III, IV, unknown).

^b Additionally adjusted for primary treatment (CT, CT + RT, CT + rituximab, SCT, other/no treatment/unknown).

^c BL corresponds to ICCC-3 diagnostic group IIc.

Supplementary Table S3. Overview of protocols used in the treatment of non-Hodgkin lymphoma (NHL) in children (0-17 years) and adolescents & young adults (AYAs, 18-39 years) in the Netherlands, 1990-2015

NHL subtype	Age group	Commonly used first-line treatment protocols in the Netherlands
T-lymphoblastic lymphoma	Children	<p>1990-1991: ALL-7 protocol (based on ALL-Berlin-Frankfurt-Münster (BFM)-86)¹</p> <p>1991-2003: ALL-8 protocol (based on ALL-BFM-90)²</p> <p>2003-2015: Euro-LB02 protocol (based on NHL-BFM90 study)³</p>
T-lymphoblastic lymphoma	AYAs	<p>Acute lymphoblastic leukemia (ALL) regimens</p> <p>1990-1992: Dutch-Belgian Cooperative Trial Group for Hematology Oncology (HOVON)-5 protocol⁴</p> <p>1992-1999: HOVON-18 protocol⁵</p> <p>1999-2005: HOVON-37 protocol⁵</p> <p>2005-2009: HOVON-70 protocol (based on intensive pediatric French Acute Lymphoblastic Leukaemia study group (FRALLE) 93 high risk protocol)⁶</p> <p>2009-2015: HOVON-100 protocol (based on HOVON-70 protocol)⁷</p> <p>Note: during 1994-2003, a limited number of T-LBL patients with less extensive disease was included in the HOVON-27BL trial⁸</p>
Burkitt lymphoma	Children	<p>1990-1996: Société Française d'Oncologie Pédiatrique (SFOP) Lymphomes Malins B (LMB) 89 protocol⁹</p> <p>1996-2008: French-American-British (FAB) LMB96 international protocol¹⁰⁻¹²</p> <p><u>Low risk (group A, group B low/intermediate risk)</u> 2008-2015: Dutch Childhood Oncology Group (SKION) B-NHL/B-ALL 2008 protocol (based on the LMB89, 96, and 2001 protocols)</p> <p><u>High risk (group B high risk, group C1, group C3)</u> 2008-2011: SKION B-NHL/B-ALL 2008 protocol</p> <p>2011-2015: SKION-Inter-B-NHL ritux 2010 protocol¹³</p>
Burkitt lymphoma	AYAs	<p>There was not a standard first-line treatment for adult Burkitt lymphoma in the Netherlands¹⁴.</p> <p>The following protocols were commonly used:</p> <ul style="list-style-type: none"> • HOVON-27BL protocol^{8,14} <ul style="list-style-type: none"> • Treatment was preceded by three courses of dose-dense intensified R-CHOP from approximately 2005 onwards.

- Adapted pediatric LMB protocol¹⁵
- Hoelzer / German Multicenter Study Group for Adult ALL (GMALL) protocol¹⁶
- (R-)CODOX-M/(R-)IVAC¹⁷

Note: rituximab was added to the above listed chemotherapy regimens as from 2003 to 2004 onwards^{14,18}.

Diffuse large B-cell lymphoma	Children	<p>1990-1996: SFOP LMB89 protocol⁹</p> <p>1996-2008: FAB LMB96 international protocol¹⁰⁻¹²</p> <p><u>Low risk (group A, group B low/intermediate risk)</u> 2008-2015: SKION B-NHL/B-ALL 2008 protocol (based on the LMB89, 96, and 2001 protocols)</p> <p><u>High risk (group B high risk, group C1, group C3)</u> 2008-2011: SKION B-NHL/B-ALL 2008 protocol</p> <p>2011-2015: SKION-Inter-B-NHL ritux 2010 protocol¹³</p>
Diffuse large B-cell lymphoma	AYAs	<p>1990-1993: eight courses of standard CHOP-21¹⁹</p> <p>1994-2004: multiple variants of CHOP-14/21²⁰</p> <p>2004-2015: variants of R-CHOP-14/21^{21,22}</p>
Anaplastic large cell lymphoma	Children	<p>1990-1999: various strategies</p> <ul style="list-style-type: none"> • For example, LMB regimens for B-NHL⁹⁻¹² or an APO regimen for advanced-stage large-cell lymphoma²³ <p>1999-2015: ALCL99 protocol (based on NHL-BFM90)²⁴</p>
Anaplastic large cell lymphoma	AYAs	<p>1990-2015: multiple variants of CHOP-14/21^{19,20}</p> <ul style="list-style-type: none"> • In some cases CHOP was followed by a stem cell transplantation (mainly in patients with anaplastic lymphoma kinase (ALK)-negative disease)
