Cancer testis antigens in newly diagnosed and relapse multiple myeloma: prognostic markers and potential targets for immunotherapy. *Haematologica* 2011;96(12):1662-1669. doi:10.3324/haematol.2010.037978

Online Supplementary Figure S1. Co-expression of testis-restricted and testis/brain-restricted CTA genes in newly diagnosed cases (A) and in relapse cases (B). Black indicates presence of expression; white, absence of expression. In the left column in each panel, a bar marks every 50 patients. Genes shown are MAGEC1, MAGEB2, SSX1, FAM133A, CTNNA2 and CTAGE1.

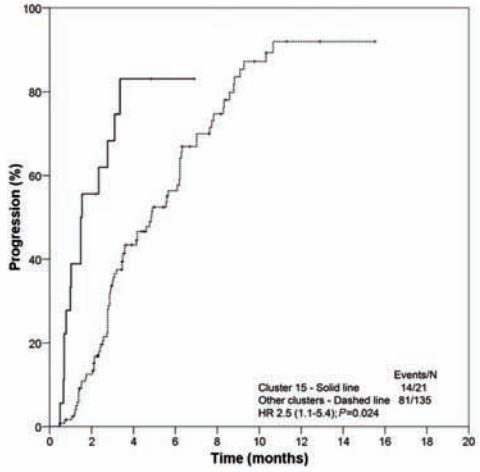

Online Supplementary Figure S2. Cluster analysis of the presence of CTA gene expression. Fifteen clusters are found (A), of which 5, 12 and 15 combined show a correlation to progression free survival in newly diagnosed cases (B). Cluster 15 holds prognostic value for APEX samples (C, D). The bar directly below the sample dendrogram indicates newly diagnosed cases (light gray) and relapse cases (dark gray).

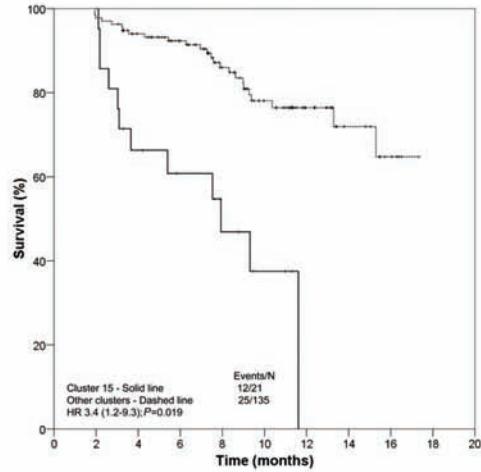

A

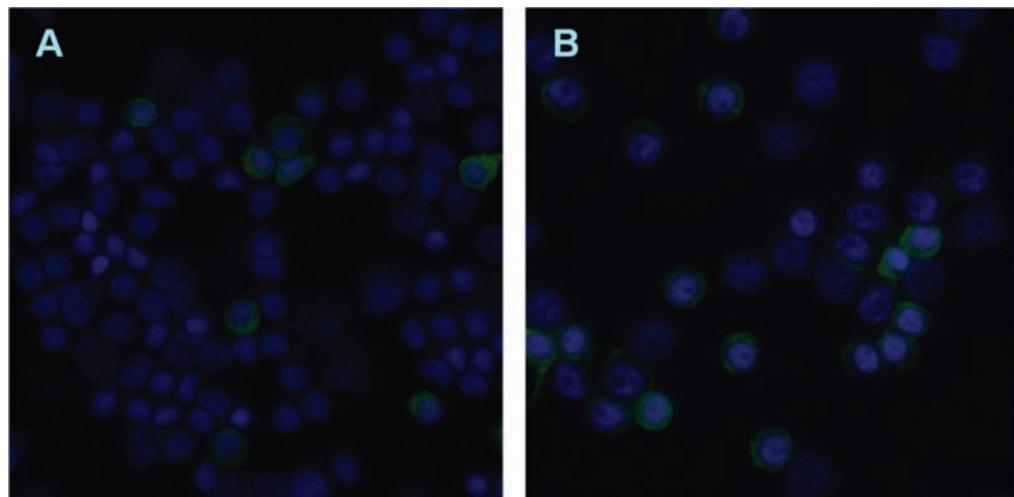

C

D

Online Supplementary Figure S3. Expression of MAGEC1 in myeloma specimens of which gene expression microarrays were performed. (A) 10% positive for MAGEC1 and no presence call; (B) 90% positive for MAGEC1 with presence call. Cytospins were fixed in acetone for 5 min and were air-dried for an additional 10 min. Slides were incubated with primary antibody O/N at 4°C, followed by 30 min of incubation with Alexa Fluor-labeled antibodies (Molecular Probes). Sections were embedded in Vectashield (Vector Labs). Antibody for MAGEC1 was CT7-33 (Sigma-Aldrich).

Online Supplementary Table S1. First four columns taken from Ctdatabase.

non-secretory		4 (2)	
nd	36 (11)	4 (2)	

*. Age <65 was an enrolment criterium for the HOVON65/GMMG-HD4 study, which explains the significant difference shown here.

nd: not determined; NS: not significant.

Online Supplementary Table S4. CTA genes with presence of more than 5% in newly diagnosed or relapse population. The testis-restricted, testis-brain restricted and top 5 testis selective genes are given in Table 1. Here the remaining testis-selective genes, genes with no known tissue restriction and genes only present on platform U133Plus2.0 are given.

Online Supplementary Table S6. Level of expression in gene presence calls. For each gene, cases with a present call were split into those with expression for that gene higher than study specific cut off of expression within that gene or lower than the cut off. Significance of difference in high expression frequency is given with an asterisk. Fisher's Exact test with Benjamini-Hochberg correction (5%). The 80th percentile per gene within the cases with present calls was calculated. The median of this value was used as a cut off for determining high expression. All data sets were median centered and standard deviation was set to 1.
