Hepatic hypoxia-inducible factor-2 down-regulates hepcidin expression in mice through an erythropoietin-mediated increase in erythropoiesis. *Haematologica* 2012;97(6):827-834. doi:10.3324/haematol.2011.056119

WT : *Hif2a*^{lox/lox} Albumin Cre-

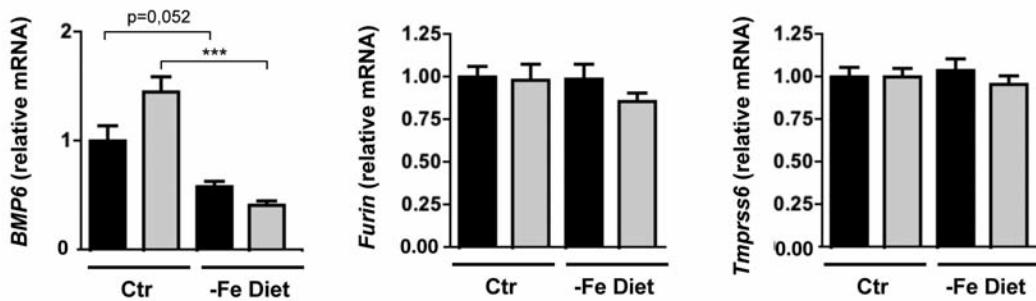

KO : *Hif2a*^{lox/lox} Albumin Cre+

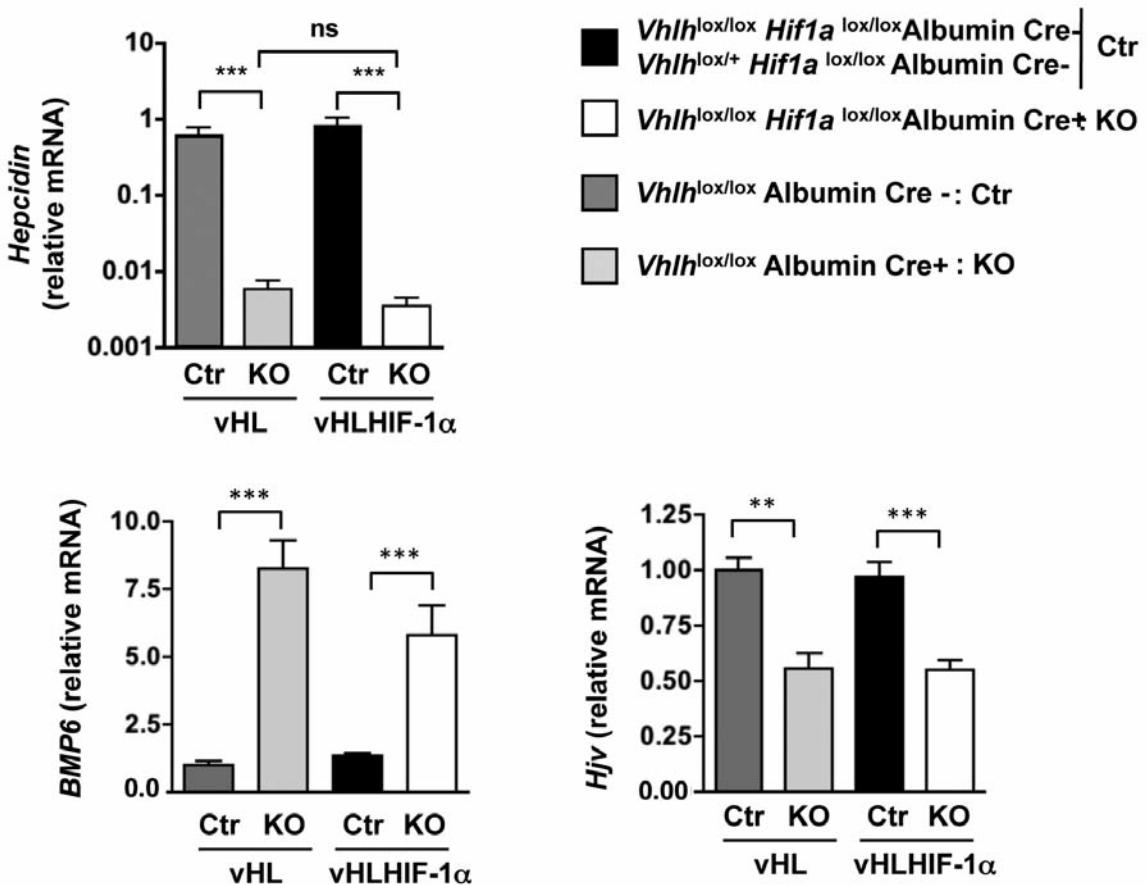

Online Supplementary Figure S1. Hepatocyte-specific deletion of HIF-2 α (A) Recombination efficiency for *Hif2a*^{lox/lox} alleles quantified by real-time polymerase chain reaction of genomic DNA isolated from the liver of *Hif2a*^{lox/lox}Albumin Cre- (WT) and *Hif2a*^{lox/lox}Albumin Cre+ (KO) mice. (B) HIF-2 α mRNA levels in primary hepatocytes of WT and KO mice as determined by real-time polymerase chain reaction.

■ *Hif2a*^{lox/lox}Albumin Cre-

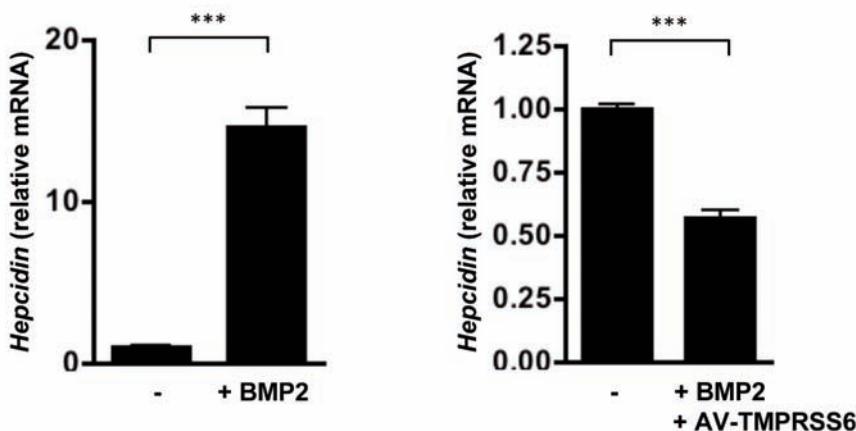

□ *Hif2a*^{lox/lox}Albumin Cre+

Online Supplementary Figure S2. Iron deficiency does not transcriptionally regulate furin or TMPRSS6. *Hif2a*^{lox/lox}Albumin Cre- and *Hif2a*^{lox/lox}Albumin Cre+ littermates were fed an iron deficient (-Fe diet) or control diet (Ctr) for 2 months after weaning. (A) BMP6, Furin and TMPRSS6 relative mRNA expression normalized to 18S mRNA. Results expressed as a fold-change compared with levels in *Hif2a*^{lox/lox}Albumin Cre- mice on a control diet. n ≥ 4 for each group.

Online Supplementary Figure S3. Transcriptional regulation of hepcidin, BMP6 and Hjv in the liver of $Vhl^{lox/lox}$ Albumin Cre+ and $Vhl^{lox/lox} Hif1a^{lox/lox}$ Albumin Cre+ mice. Relative mRNA expression normalized to 18S mRNA in the liver of $Vhl^{lox/lox}$ Albumin Cre+ (KO grey bar) or $Vhl^{lox/lox} Hif1a^{lox/lox}$ Albumin Cre+ (KO white bars) compared to $Vhl^{lox/lox}$ Albumin Cre- (dark gray bar) or Ctr (black bars). Ctr: n=9; KO: n=8.

Online Supplementary Figure S4. Transcriptional regulation of hepcidin in primary hepatocytes. Incubation of primary hepatocytes with BMP2 (20 ng/mL) for 24 h, infected or not with a TMPRSS6 adenovirus (AV-Tmprss6) at a multiplicity of infection of 1. Hepcidin relative mRNA expression normalized to cyclophilin-A. n=3 per group.
