Title	Insights Into Pathological Mechanisms Of Missense Mutations In C-Terminal Domains Of von Willebrand Factor Causing Qualitative Or Quantitative von Willebrand Disease
First author	Hamideh Yadegari

According to the International Committee of Medical Journal Editors (ICMJE)

(http://www.icmje.org/ethical_1author.html):

“Authorship credit should be based on: 1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data; 2) drafting the article or revising it critically for important intellectual content; and 3) final approval of the version to be published. Authors should meet conditions 1, 2 and 3. Acquisition of funding, collection of data, or general supervision of the research group alone does not constitute authorship”.

The responsible author(s) of this manuscript confirm(s) that all persons designated as authors qualify for authorship, and that each author has participated sufficiently in the work to take public responsibility for appropriate portions of the content.

Specific contributions of each author are listed on page 2 of this document.

Responsible author(s):

author(s) responsible for the integrity of the work as a whole

Author contributions (maximum 1 page):

Please describe the contributions of each author, indicating who was responsible for each part of the study and the preparation of the manuscript (collection of data, experiments, data analysis, generation of figures, collection of images, interpretation of data, preparation of the text, etc.)

Hamideh Yadegari designed the study, did genotyping, gene expression experiments, interpreted the data and wrote the paper.

Julia Driesen participated in interpretation and statistical analysis of the data.

Anna Pavlova interpreted the genotypic data of patients; reviewed and edited the manuscript.

Arijit Biswas designed and performed the structural analysis, and revised the manuscript.

Vytautas Ivaskevicius and Robert Klamroth contributed in collection of patients data.

Johannes Oldenburg designed the study; evaluated phenotypic and genotypic data of patients, interpreted the data; reviewed and revised the manuscript.
