Title	<i>Comprehensive whole-genome sequencing of an early-stage primary myelofibrosis patient defines low mutational burden and nonrecurrent candidate genes</i>
First author	Jason D. Merker

According to the International Committee of Medical Journal Editors (ICMJE)

(http://www.icmje.org/ethical_1author.html):

“Authorship credit should be based on: 1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data; 2) drafting the article or revising it critically for important intellectual content; and 3) final approval of the version to be published. Authors should meet conditions 1, 2 and 3. Acquisition of funding, collection of data, or general supervision of the research group alone does not constitute authorship”.

The responsible author(s) of this manuscript confirm(s) that all persons designated as authors qualify for authorship, and that each author has participated sufficiently in the work to take public responsibility for appropriate portions of the content.

Specific contributions of each author are listed on page 2 of this document.

Responsible author(s):

author(s) responsible for the integrity of the work as a whole

Author contributions (maximum 1 page):

Please describe the contributions of each author, indicating who was responsible for each part of the study and the preparation of the manuscript (collection of data, experiments, data analysis, generation of figures, collection of images, interpretation of data, preparation of the text, etc.)

All authors either drafted the manuscript or critically reviewed it for important intellectual content, and all authors approved the final version of the manuscript to be published. The following individuals also made these contributions:

Jason D. Merker – recruited, consented, and obtained specimens from the patients; performed experiments; data analysis and curation; coordinated the research; generation of figures; interpretation of data; drafted initial version of manuscript

Krishna M. Roskin – data analysis and curation; generation of figures; interpretation of data

Dana Ng – performed experiments; interpretation of data

Cuiping Pan – data analysis and curation; interpretation of data

Dianna G. Fisk – data analysis and curation; interpretation of data

Jasmine J. King – performed experiments

Ramona Hoh – performed experiments

Michael Stadler – data analysis and curation; generation of figures; interpretation of data

Lawrence M. Okumoto – recruited, consented, and obtained specimens from the patients

Parveen Abidi – recruited, consented, and obtained specimens from the patients

Rhonda Hewitt – recruited, consented, and obtained specimens from the patients

Carol D. Jones – performed experiments

Linda Gojenola – performed experiments

Michael J. Clark – data analysis and curation; interpretation of data

Bing Zhang – performed experiments

Athena M. Cherry – coordinated the research

Tracy I. George – performed experiments; coordinated the research; generation of figures; collection of images

Michael Snyder – data analysis and curation

Scott D. Boyd – data analysis and curation; coordinated the research; interpretation of data

James L. Zehnder – coordinated the research; interpretation of data

Andrew Z. Fire – data analysis and curation; coordinated the research; interpretation of data; drafted initial version of manuscript

Jason Gotlib – recruited, consented, and obtained specimens from the patients; coordinated the research; interpretation of data; drafted initial version of manuscript
