Title	<i>JAK2V617F allele burden is reduced by busulfan therapy: A new observation using an old drug</i>
First author	<i>Emil T. Kuriakose, MD</i>

According to the International Committee of Medical Journal Editors (ICMJE)

(http://www.icmje.org/ethical_1author.html):

“Authorship credit should be based on: 1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data; 2) drafting the article or revising it critically for important intellectual content; and 3) final approval of the version to be published. Authors should meet conditions 1, 2 and 3. Acquisition of funding, collection of data, or general supervision of the research group alone does not constitute authorship”.

The responsible author(s) of this manuscript confirm(s) that all persons designated as authors qualify for authorship, and that each author has participated sufficiently in the work to take public responsibility for appropriate portions of the content.

Specific contributions of each author are listed on page 2 of this document.

Responsible author(s):

author(s) responsible for the integrity of the work as a whole

Author contributions (maximum 1 page):

ETK and RTS designed and implemented the study, conducted data analysis and interpretation. ETK wrote the manuscript. SG collected and analyzed data, and contributed to manuscript and figure preparation. YLW conducted qualitative JAK2V617F testing, data analysis and interpretation. NPC and AVJ conducted quantitative JAK2V617F allele determination, data analysis and interpretation. RB collected patient samples and analyzed data.
