Title	<i>Gemtuzumab ozogamicin in combination with vorinostat and azacitidine in older patients with relapsed or refractory acute myeloid leukemia (AML): a phase 1/2 study</i>
First author	<i>Roland B. Walter</i>

According to the International Committee of Medical Journal Editors (ICMJE)

(http://www.icmje.org/ethical_1author.html):

“Authorship credit should be based on: 1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data; 2) drafting the article or revising it critically for important intellectual content; and 3) final approval of the version to be published. Authors should meet conditions 1, 2 and 3. Acquisition of funding, collection of data, or general supervision of the research group alone does not constitute authorship”.

The responsible author(s) of this manuscript confirm(s) that all persons designated as authors qualify for authorship, and that each author has participated sufficiently in the work to take public responsibility for appropriate portions of the content.

Specific contributions of each author are listed on page 2 of this document.

Responsible author:

author responsible for the integrity of the work as a whole

Name: Roland B. Walter, MD PhD
Institute: Fred Hutchinson Cancer Research Center
e-mail: rwalter@fhcrc.org

Author contributions (maximum 1 page):

Roland B. Walter contributed to the conception and design of the study as well as drafting of the manuscript, participated in the collection and assembly of data, contributed to patient recruitment, and participated in the data analysis and interpretation.

Bruno C. Medeiros contributed to patient recruitment and participated in the data analysis and interpretation.

Kelda M. Gardner contributed to patient recruitment and participated in the data analysis and interpretation.

Kaysey F. Orlowski participated in the collection and assembly of data.

Leonel Gallegos participated in the collection and assembly of data.

Bart L. Scott contributed to patient recruitment and participated in the data analysis and interpretation.

Paul C. Hendrie contributed to patient recruitment and participated in the data analysis and interpretation.

Elihu E. Estey contributed to the conception and design of the study as well as drafting of the manuscript, contributed to patient recruitment, and participated in the data analysis and interpretation.

All authors revised the manuscript critically, and gave final approval to submit for publication.
