Title	<i>Soft-tissue extramedullary multiple myeloma prognosis is significantly worse in comparison to bone-related extramedullary relapse</i>
First author	<i>Ludek Pour</i>

According to the International Committee of Medical Journal Editors (ICMJE)

(http://www.icmje.org/ethical_1author.html):

“Authorship credit should be based on: 1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data; 2) drafting the article or revising it critically for important intellectual content; and 3) final approval of the version to be published. Authors should meet conditions 1, 2 and 3. Acquisition of funding, collection of data, or general supervision of the research group alone does not constitute authorship”.

The responsible author(s) of this manuscript confirm(s) that all persons designated as authors qualify for authorship, and that each author has participated sufficiently in the work to take public responsibility for appropriate portions of the content.

Specific contributions of each author are listed on page 2 of this document.

Responsible author(s):

author(s) responsible for the integrity of the work as a whole

Author contributions (maximum 1 page):

Please describe the contributions of each author, indicating who was responsible for each part of the study and the preparation of the manuscript (collection of data, experiments, data analysis, generation of figures, collection of images, interpretation of data, preparation of the text, etc.)

Ludek Pour collected the samples, analyzed and interpreted the data and wrote the manuscript.

Sabina Sevcikova co-wrote the manuscript, generated some figures and helped analyze data.

Henrieta Greslikova and Renata Kupska performed FISH analysis, interpreted the data and helped with the manuscript.

Petra Majkova performed statistical analyses of all available data and generated some figures.

Lenka Zahradova, Viera Sandecka, Zdenek Adam, Marta Krejci collected clinical samples and interpreted the data.

Petr Kuglik and Roman Hajek provided critical revision of the results, interpreted the data and wrote the paper.
