## AUTHOR CONTRIBUTION FORM

<b>Title</b>	Dexamethasone (6 mg/m <sup>2</sup> /d) and prednisolone (60 mg/m <sup>2</sup> /d) in induction therapy of childhood acute lymphoblastic leukemia are equally effective in EORTC CLG 58951 randomized trial
<b>First author</b>	Carine DOMENECH

According to the International Committee of Medical Journal Editors (ICMJE)

([http://www.icmje.org/ethical\\_1author.html](http://www.icmje.org/ethical_1author.html)):

*“Authorship credit should be based on: 1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data; 2) drafting the article or revising it critically for important intellectual content; and 3) final approval of the version to be published. Authors should meet conditions 1, 2 and 3. Acquisition of funding, collection of data, or general supervision of the research group alone does not constitute authorship”.*

**The responsible author of this manuscript confirms that all persons designated as authors qualify for authorship, and that each author has participated sufficiently in the work to take public responsibility for appropriate portions of the content.**

<b>Responsible author</b> ( <i>author responsible for the integrity of the work as a whole</i> )

### Author contributions

*Please describe the contributions of each author, indicating who was responsible for each part of the study and the preparation of the manuscript (collection of data, experiments, data analysis, generation of figures, interpretation of data, preparation of the text, etc.) :*

CD recruited patients, checked and interpreted the data, wrote the manuscript (helped by SS and YBertrand), and takes primary responsibility of the manuscript. SS was the study statistician; he analyzed the data and designed the figures and tables. Y. Bertrand is principal investigator of the 58951 study. Y. Bertrand and Y. Benoit planned and coordinated the study. BDM, FM, GP, AU, AF, NS, PL, MM, PR, DP, FM, PP, YB and Y. Bertrand included patients in the trial and provided clinical data. ND, SG and HC reviewed the biological data. All authors participated in study supervision, participated in data interpretation and reviewed the manuscript.

The authors report no potential conflicts of interest.
