CD14+ cells from peripheral blood positively regulate hematopoietic stem and progenitor cell survival resulting in increased erythroid yield

Disclosures: The authors report no potential conflicts of interest.

Contributions: EH, EvdA, FM and MM performed the experiments. FE performed the erythroblast/CD14+ co-culture experiments. NY performed conditioned medium experiments. AM and EvdA designed the experiments, supervised the study and analyzed the data. EvdA and EH wrote the manuscript. MvL and AM co-supervised and helped writing the manuscript. The manuscript was critically revised by all authors. The authors report no potential conflicts of interest.
