Version 3

Complement deposition in Autoimmune Hemolytic Anemia is a footprint
for difficult-to-detect IgM-autoantibodies

Disclosures: Diana Wouters and Sacha Zeerleder receive an unrestricted grant from Viropharma (now Shire).

Contributions: EM, DW and SZ designed the project, interpreted the data and wrote the paper. EM performed the experiments and analyzed the data. CB, CF and MdH collected patient samples, supervised the routine diagnostics tests and contributed with useful discussions.
