HAEMATOL/2015/137125  
Version 3

Helicase-like transcription factor is a RUNX1 target whose  
downregulation promotes genomic instability and correlates with  
complex cytogenetic features in acute myeloid leukemia

Chi Keung Cheng, Natalie P.H. Chan, Thomas S.K. Wan, Lam Lai  
Ying, Coty H.Y. Cheung, Terry H.Y. Wong, Rosalina K.L. Ip, Raymond  
S.M. Wong, and Margaret H.L. Ng

Disclosures: All authors declare no conflict of interest.

Contributions: C.K.C. designed and performed research and wrote the manuscript;  
N.P.H.C., T.S.K.W., L.L.L., C.H.Y.C. and T.H.Y.W. performed research; N.P.H.C., R.K.L.I.  
and R.S.M.W. collected and analyzed clinical data; and M.H.L.N. designed and performed  
research and advised on revision of the manuscript.
