Version 5

Association of Acute Myeloid Leukemia's Most Immature Phenotype  
with Risk Groups and Outcomes

Jonathan M. Gerber, Joshua F. Zeidner, Sarah Morse, Amanda L. Blackford, Brandy Perkins, Breann Yanagisawa, Hao Zhang, Laura Morsberger, Judith Karp, Yi Ning, Christopher D. Gocke, Gary L. Rosner, B. Douglas Smith, and Richard J. Jones

Disclosures: This work was supported by the Leukemia & Lymphoma Society (LLS) (TRP R6459-13, R.J.J. and J.M.G.), and the National Institutes of Health [grants P01 CA015396 (R.J.J.), U01 A70095 (J.E.K.), 5T32 HL007525 (J.M.G.), and P30 CA006973]. R.J.J. holds the patent for Aldefluor and, under a licensing agreement between Aldagen and the Johns Hopkins University, is entitled to a share of royalties received by the University. The terms of this arrangement are being managed by the Johns Hopkins University in accordance with its conflict of interest policies.

Contributions: J.M.G., B.D.S. J.F.Z., and R.J.J. designed the research and wrote the paper; all the authors performed the research; J.M.G., J.F.Z., A.B., S.M., B.P., B.D.S., G.L.R., and R.J.J. analyzed the data. All authors have seen, approved, and ensure the integrity of the final version of the manuscript.
