Version 5

Impaired formation of erythroblastic islands is associated with erythroid failure and poor prognosis in a significant proportion of patients with myelodysplastic syndromes

Guntram Buesche, Huesniye Teoman, Aristoteles Giagounidis, Gudrun Göhring, Brigitte Schlegelberger, Arnold Ganser, Carlo Aul, and Hans-Heinrich Kreipe

Disclosures: nothing to disclose (no competing financial interests in relation to the work described)

Contributions: GB was the principal investigator, performed statistical analyses, wrote the manuscript and takes primary responsibility for this paper. HT performed histomorphometric and immunohistochemical evaluations. GG and BS performed cytogenetic analyses. AriG, AG, and CA recruited and treated patients. GB, AriG, AG, CA, and HK performed diagnosis and classification of disease. The authors report no potential conflict of interest.
