Version 3

A distinct plasmablast and naive B-cell phenotype in primary immune thrombocytopenia

Shaun M. Flint, Adele Gibson, Geoff Lucas, Raghava Nandigam,
Louise Taylor, Drew Provan, Adrian C. Newland, Caroline O. Savage,
and Robert B. Henderson

Disclosures: R.B.H., C.O.S. and A.G. are employees of GSK, and S.M.F. is funded by GSK through the Cambridge Translational Medicine and Therapeutics Programme. D.P. has received honoraria from GSK and Amgen and is consultant for Shionogi. A.C.N. has received honoraria from GSK, Amgen and Roche and is a consultant for Angle PLC.

Contributions: R.B.H. and S.M.F. designed the study, processed samples, analysed results and wrote the manuscript. A.G. processed samples and analysed results. C.O.S. sponsored the study and assisted with study design and data interpretation. A.C.N. and D.P. assisted with study design, patient recruitment, and data analysis. L.T. recruited patients and provided clinical data. R.N. provided clinical data and assisted with data analysis. G.L. assisted with study design and supervised the platelet antibody testing. All authors had the opportunity to review and amend the final manuscript.
