A novel mechanism of NPM1 cytoplasmic localization in acute myeloid leukemia: the recurrent gene fusion NPM1-HAUS1

Paulo Vidal Campregher, Welbert de Oliveira Pereira, Bianca Lisboa, Renato Puga, Elvira Deolinda Rodrigues Pereira Velloso, Ricardo Helman, Luciana Cavalheiro Marti, João Carlos Campos Guerra, Kalliopi N. Manola, Roberta Cardoso Petroni, Alanna Mara Pinheiro Sobreira Bezerra, Fernando Ferreira Costa, Nelson Hamerschlak, and Fábio Pires de Souza Santos

Disclosures: There are no conflicts of interest of any kind involved with this publication. The authors do not have relationships with commercial entities. This study received no funding or financial support. There is no patent pending nor issued related to this study.

Contributions: PVC designed the study, analyzed the data, planned the experiments, wrote and reviewed the manuscript. FPSS designed the study, analyzed the data, planned the experiments and reviewed the manuscript. WOP, BL and LM performed the experiments, analyzed the data and reviewed the manuscript. RP performed bioinformatics analysis and reviewed the manuscript. ERP performed cytogenetic analysis and reviewed the manuscript. AMPSB made the morphological analysis and reviewed the manuscript. JCCG, FFC and NH analyzed the data and reviewed the manuscript. KNM analyzed the data, performed experiments and reviewed the manuscript. RCP performed the experiments, analyzed the data and reviewed the manuscript.
