Increased risk of axial fractures in patients with untreated chronic  
lymphocytic leukemia: a population-based analysis

Adam J. Olszewski, Roe Gutman, and Charles B. Eaton

Disclosures: This study was supported by a Medical Research Grant No.20144281 from Rhode Island Foundation. AJO is partly supported by the American Society of Hematology Research Scholar Award. This study used the linked SEER-Medicare database. The interpretation and reporting of these data are the sole responsibility of the authors. The authors acknowledge the efforts of the National Cancer Institute; the Office of Research, Development and Information, CMS; Information Management Services (IMS), Inc.; and the Surveillance, Epidemiology, and End Results (SEER) Program tumor registries in the creation of the SEER-Medicare database. Disclosures: AJO: Bristol-Myers Squibb (consulting); Genentech (research, institution); TG Therapeutics (research, institution). CBE and RG declare no conflict of interest.

Contributions: AJO, RG designed research. AJO performed data analysis. AJO, RG and CBE interpreted the data and wrote the manuscript.
