Version 4

Role of serum free light chain assay in the detection of early relapse
and prediction of prognosis after relapse in multiple myeloma patients
treated upfront with novel agents

Paola Tacchetti, Annalisa Pezzi, Elena Zamagni, Lucia Pantani, Serena
Rocchi, Beatrice Anna Zannetti, Katia Mancuso, Ilaria Rizzello, and
Michele Cavo

Disclosures: MC has received honoraria and has been a member of the advisory board for Celgene, Janssen, Millennium-Takeda and Amgen. All other authors declare they have no relevant financial interests in competing. The work had no specific funding.

Contributions: PT performed the research, collected, analyzed and interpreted data, and wrote the manuscript. AP performed statistical analysis and reviewed the manuscript. EZ, LP, BAZ, KM and IR were involved in data analysis and reviewed the manuscript. SR collected and analyzed data, and reviewed the manuscript. MC designed the study, analyzed and interpreted data, and critically revised the manuscript. All authors had access to, commented on and approved the final manuscript.
