Version 2

Patient-derived anti- β 2GP1 antibodies recognize a peptide motif
pattern and not a specific sequence of residues

Philippe de Moerloose, Céline Fickentscher, Françoise Boehlen,
Jean-Marie Tiercy, Egbert K.O. Kruithof, and Karim J. Brandt

Disclosures: The authors declare no competing financial interests.

Contributions: K.J.B. conceived and designed the experiments. K.J.B., C.F performed the experiments. K.J.B., E.K.O.K and P.d.M analyzed the data. J.M.T performed the HLA typing. F.B provided patient samples. K.J.B. and P.d.M wrote the paper.
