Version 4

Phenotype in combination with genotype improves outcome prediction
in acute myeloid leukemia: a report from Children's Oncology
Group protocol AAML0531

Andrew P. Voigt, Lisa Eidenschink Brodersen, Todd A. Alonzo, Robert
B. Gerbing, Andrew J. Menssen, Elisabeth R. Wilson, Samir Kahwash,
Susana C. Raimondi, Betsy A. Hirsch, Alan S. Gamis, Soheil
Meshinchi, Denise A. Wells, and Michael R. Loken
(Collaborative Groups: Children's Oncology Group)

Disclosures: This work was supported by grants U10CA098543 (Chair's grant),
U10CA098413 (the Statistical Center Grant), U10CA180886 (NCTN Operations Center
Grant), and U10CA180899 (NCTN Statistics & Data Center Grant). MRL and DAW are
equity owners of Hematologics, Inc. LEB, APV, AJM, and EW are employed by
Hematologics, Inc. The remaining authors declare no competing financial interests.

Contributions: LEB, MRL, APV, and SM designed and performed research, analyzed data,
and wrote the manuscript. EW performed research, analyzed data, and assisted in writing
and editing the manuscript. AJM, and DAW performed research, analyzed data, and edited
the manuscript. TAA and RBG designed research, performed statistical analyses and
edited the manuscript. SK, BAH, and SCR performed research and edited the manuscript.
ASG designed the research, analyzed data, and edited the manuscript.
