Version 4

A novel AGGF1-PDGFR β fusion in pediatric T-cell acute lymphoblastic leukemia

Matthew S Zabriskie, Orlando Antelope, Anupam R Verma, Lauren R Draper, Christopher A Eide, Anthony D Pomicter, Thai Hoa Tran, Brian J Druker, Jeffrey W Tyner, Rodney R Miles, James M. Graham, Jae-Yeon Hwang, Katherine E Varley, Reha M Toydemir, Michael W Deininger, Elizabeth A Raetz, and Thomas O'Hare

Disclosures: CONFLICT OF INTEREST Research support for JWT is received from Aptose, Array, AstraZeneca, Constellation, Genentech, Gilead, Incyte, Janssen, Seattle Genetics, Syros, Takeda; Scientific Advisory Board for Leap Oncology. B.J.D.'s institution (OHSU) receives clinical trial funding from Novartis, Bristol-Myers Squibb, and ARIAD.

Contributions: AUTHOR CONTRIBUTIONS MSZ, OA, CAE, ADP, THT, RRM, JMG, J-YH, RMT, EAR and TO performed experiments, analyzed data and prepared display items. LRD and ARV provided clinical specimens and summarized the case history. CAE, JWT and BJD performed and supervised ex vivo TKI response experiments with primary T-ALL specimens. MSZ, CAE, RRM, KTV, JWT, BJD and MWD assisted in the writing of the manuscript and provided valuable editorial comments. JMG, J-YH and KTV carried out and analyzed the RNA-seq experiments. RMT, EAR and TO conceptualized, planned and supervised the studies and wrote the manuscript.
