Version 3

Quantitative competitive allele-specific TaqMan duplex PCR
(qCAST-Duplex PCR) assay: a refined method for highly sensitive and
specific detection of JAK2V617F mutant allele burdens

Chia-Chen Hsu, Cih-En Huang, Yu-Ying Wu, Yi-Yang Chen, Jrhau
Lung, Yu-Wei Leu, Chian-Pei Li, Hsing-Yi Tsou, Wei-Hsuan Chuang,
Chang-Hsien Lu, and Chih-Cheng Chen

Disclosures: The idea of mutation detection method undergoes the provisional patent application. Application number: 62/646,646 Date: 2018/03/22

Contributions: C-C H. C-E H. and C-C C. conceived and designed the experiments. C-E H., Y-Y W., Y-Y C., H-Y T. and C-H L. provided patient care and collected all clinical samples. J L., Y-W L., W-S C., C-P L., and C-C H. performed all the experiments as well as clinical sample analyses. C-C C., C-C H. and C-E H. interpreted the results of all laboratory experiments. C-C C. and C-C H. wrote the paper.
