Relapse of acute myeloid leukemia after allogeneic stem cell transplantation is associated with gain of WT1 alterations and high mutation load

Sebastian Vosberg, Luise Hartmann, Klaus H. Metzeler, Nikola P. Konstandin, Stephanie Schneider, Ashok Varadharajan, Andreas Hauser, Stefan Krebs, Helmut Blum, Stefan K. Bohlander, Wolfgang Hiddemann, Johanna Tischer, Karsten Spiekermann, and Philipp A. Greif

Disclosures: K.H. Metzeler reports receiving commercial research grants from and is a consultant/advisory board member for Celgene. No potential conflicts of interest were disclosed by the other authors.

Contributions: PAG and KS conceived and designed the experiments. LH and SK performed experiments. SV, LH, and KHM analyzed data. SV, AV, and AH provided bioinformatics support. HB managed the sequencing platform. PAG, NPK, SS, SKB, WH, JT, and KS characterized patient samples. PAG and KS supervised the project. SV and PAG wrote the manuscript.
