

Current information on most recent advances regarding CNS risk assessment and approaches to CNS prophylaxis in patients with DLBCL

Clinical risk models: International Prognostic Index (IPI) scores

- 5 risk factors
- 1- Age > 60 years
 - 2- Elevated lactate dehydrogenase (LDH)
 - 3- Eastern Cooperative Oncology Group Performance Status (ECOG-PS) > 1
 - 4- Advanced stage disease
 - 5- Involvement of more than one extranodal site

Biologic risk factors

- MYC rearrangement
- Translocations of MYC and BCL2 and/or BCL6 (double- or triple-hit lymphoma)*

* Median overall survival: > 2 years

High-risk extranodal sites

- | | |
|---------------------------|-----------------------|
| • Testicular involvement* | • Ovarian |
| • Bone marrow | • Uterine |
| • Paranasal sinus | • Breast |
| • Orbital | • Kidney |
| • Pericardial | • Adrenal involvement |

*CNS relapse rates: 12-25%

CNS prophylaxis

- **Intrathecal therapy:** methotrexate
- **Systemic chemotherapy:** methotrexate, ibrutinib, lenalidomide
