New insight into antiphospholipid syndrome: antibodies to  $\beta$   
2glycoprotein I-domain 5 fail to induce thrombi in rats

Paolo Durigutto, Claudia Grossi, Maria Orietta Borghi, Paolo Macor,  
Francesca Pregnolato, Elena Raschi, Michael P. Myers, Philip G. de  
Groot, Pier Luigi Meroni, and Francesco Tedesco

Disclosures: none

Contributions: P.D. performed the in vivo experiments and the immunofluorescence analysis; C.G. performed the in vitro experiments; M.O.B. and C.G. designed the in vitro experiments and analysed the results; P.M. prepared and characterized the monoclonal antibody to  $\beta$ 2GPI MBB2; F.P. performed the statistical analysis of the data; E.R. purified and characterized human  $\beta$ 2GPI; M.P.M performed the sequence analysis of D4 and D5 domains of  $\beta$ 2GPI; P.G.G. generate the recombinant D4 and D5 domains of  $\beta$ 2GPI; P.L.M., and F.T. designed the experiments and wrote the manuscript. All the authors read and approved the final version of the manuscript.
