Version 3

ERG deletions in childhood acute lymphoblastic leukemia with DUX4 rearrangements are mostly polyclonal, prognostically relevant and their detection rate strongly depends on method's sensitivity

Marketa Zaliova, Eliska Potuckova, Lenka Hovorkova, Alena Musilova, Lucie Winkowska, Karel Fiser, Jan Stuchly, Ester Mejstrikova, Julia Starkova, Jan Zuna, Jan Stary, and Jan Trka

Disclosures: Authors declare no relevant competing financial interests.

Contributions: MZ and EP performed laboratory work; LH, AM, KF and JStu performed bioinformatic analyses; MZ, EP, LH, LW, EM, JStark, JZ, JStary, JT and performed post-bioinformatic data analyses and/or provided clinical data; MZ designed and led the study and wrote the manuscript. All authors revised the manuscript and approved its final version.
