Version 4

Co-inheritance of alpha thalassemia dramatically decreases the risk of acute splenic sequestration in a large cohort of newborns with hemoglobin SC

Paulo V. Rezende, André R. Belisário, Érica L. Oliveira, Jéssica A. Almeida, Larissa M.M. Oliveira, Maristela B.S.R. Muniz, and Marcos B. Viana

Disclosures: Funds: 1. Conselho Nacional de Desenvolvimento Científico e Tecnológico (CNPq; grants 448594/2014-5 and 305261/2017-7) [Brazilian government agency for research] 2. Fundação de Amparo à Pesquisa do Estado de Minas Gerais (FAPEMIG; grant PPM-00780-15 and BIP-00005-18) [Minas Gerais government agency for research] 3. Núcleo de Ações e Pesquisa em Apoio Diagnóstico (Nupad/UFMG) [Newborn Screening Program in Minas Gerais]

Contributions: PVR designed the study, generally supervised the data, helped in statistical analysis, and wrote the first draft of the manuscript; ARB supervised experimental assays, helped in statistical analysis, and revised the manuscript; ELO helped in sample preparation and experimental procedures; JAA helped in sample preparation and experimental procedures; LMMO helped in sample preparation and experimental procedures; MBSRM collected all clinical and laboratory data; MBV designed and coordinated the study and made the final revision of the manuscript. All authors approved the final version of the manuscript and the submission to Haematologica.
