Genetic loss of Tmprss6 alters terminal erythroid differentiation in a mouse model of β -thalassemia intermedia

David B. Stagg, Rebecca L. Whittlesey, Xiuqi Li, Larisa Lozovatsky, Sara Gardenghi, Stefano Rivella, and Karin E. Finberg

Disclosures: DBS, RLW, XL, LL, SG, and KEF report no conflicts of interest. SR is the recipient of research funding from Ionis Pharmaceuticals, a drug discovery and development company based on antisense oligonucleotide technology. SR serves as a consultant for Ionis Pharmaceuticals, Meira GTx, Disc Medicine, Protagonist Therapeutics, and La Jolla Pharmaceuticals (LJPC).

Contributions: DBS, RLW, XL, LL, and SG, performed experiments and analyzed data. DBS and XL contributed to manuscript preparation. SR analyzed data. KEF designed all experiments, performed experiments, analyzed data, and wrote the manuscript. All authors contributed to drafting or revising the manuscript, and all authors approved the final version of the manuscript.
