Version 3

Functional interplay between NIK and c-Abl kinases limits response to
Aurora inhibitors in multiple myeloma

Laura Mazzerà, Manuela Abeltino, Guerino Lombardi, Anna Maria Cantoni, Roberto Ria, Micaela Ricca, Ilaria Saltarella, Valeria Naponelli, Federica Maria Angela Rizzi, Roberto Perris, Attilio Corradi, Angelo Vacca, Antonio Bonati, and Paolo Lunghi

Collaborative Groups: Department of Medicine and Surgery, University of Parma (Laura Mazzerà, Manuela Abeltino, Antonio Bonati, Valeria Naponelli, Federica Maria Angela Rizzi), Istituto Zooprofilattico Sperimentale Lombardia Emilia Romagna (Guerino Lombardi, Micaela Ricca, Laura Mazzerà), Department of Veterinary Sciences, University of Parma (Anna Maria Cantoni, Attilio Corradi), University of Bari Aldo Moro (Roberto Ria, Ilaria Saltarella, Angelo Vacca), Centre for Molecular and Translational Oncology (COMT), University of Parma (Paolo Lunghi, Federica Maria Angela Rizzi, Roberto Perris, Antonio Bonati), Department of Chemistry, Life Sciences and Environmental Sustainability, University of Parma (Paolo Lunghi, Roberto Perris)

Disclosures: This work was supported by grants from Chiara Tassoni Onlus Association, Parma, Italy (L.M.), Associazione Italiana per la Ricerca sul Cancro (IG, Rif 10670, Italian Association for Cancer Research, Milan, Italy; A.B.), and Fondazione Cassa di Risparmio di Parma (Cariparma, Parma, Italy; A.B.). This work was supported by the Italian Ministry of Health (GR-2016-02363646 to L.M.) and by Regione Emilia Romagna L.R. 20/2002 (GPG/2018/918 to P.L.).

Contributions: L.M. performed cell culture and molecular biology experiments, apoptosis analysis, transfection experiments, analyzed the data and contributed to writing the paper; M.A. performed cell culture experiments and apoptosis analysis and contributed to transfection experiments; G.L. carried out the in vivo experiments; A.M.C. performed histological, immunohistochemical and immunofluorescence analyses; R.R. provided patient samples; M.R. contributed to in vivo experiments; I.S. performed separation of CD138+ plasma cells from multiple myeloma patient samples; V.N. performed quantitative real-time PCR; F.M.R. supervised quantitative real-time PCR; R.P. analyzed the data and critically revised the manuscript; A.C. supervised histological and immunohistochemical analyses; A.V. provided patient samples and critically revised the manuscript; A.B. provided patient samples and critically revised the manuscript; P.L. designed the research and experiments, performed cell culture and molecular biology experiments, analyzed and interpreted the data and wrote the manuscript
