Impact of clinical, cytogenetic, and molecular profiles on long-term survival after transplantation in patients with chronic myelomonocytic leukemia

Janghee Woo, Dae Ro Choi, Barry E. Storer, Cecilia Yeung, Anna B. Halpern, Rachel B. Salit, Mohamed L. Sorrow, David W. Woolston, Tim Monahan, Bart L. Scott, and H. Joachim Deeg

Disclosures: This work was supported in part by P30CA015704, CA018029, a Cancer Center New Investigator Support Grant (RBS), a 5K12CA076930 (JW), a CTI Biopharma Endowed Fellowship (JW), and an unrestricted grant from Histogenetics (HJD). DRC was supported by a stipend from Hallym University, South Korea. JW, DRC, BS, CY, ABH, RBS, MLS, DWW, TM and HJD declare no conflicts of interest. BLS received research funding from Celgene and serves on advisory boards for Celgene, Alexion, Novartis, none of which are related to the present work regarding transplantation for CMML.

Contributions: JW, DRC, CY, DWW, TM and HJD performed research, JW, DRC, BS and HJD performed data analysis, JW, ABH, RBS, MLS, BLS and HJD wrote the manuscript, HJD supervised the study.
