

Haematologica  
HAEMATOL/2018/214221  
Version 3

How I curate: applying American Society of Hematology-Clinical  
Genome Resource Myeloid Malignancy Variant Curation Expert Panel  
rules for RUNX1 variant curation for germline predisposition to myeloid  
malignancies

David Wu, Xi Luo, Simone Feurstein, Chimene Kesserwan, Shruthi  
Mohan, Daniel E. Pineda-Alvarez, and Lucy A. Godley

Disclosures: 1. Please see our updated Acknowledgements: Variant curation rules discussed in this publication were generated by the American Society of Hematology in collaboration with Baylor College of Medicine and the University of North Carolina, NIH-funded Clinical Genome Resource grant award recipients. The NIH supported this work through: U41HG009649 (X.L., S.E.P.) and U41HG009650 (S.M., J.E.R.), and the 2018 NIH/NCI Leukemia SPORE DRP award (P50CA100632-16, project 00007529) (C.D.D.). 2. Daniel E. Pineda-Alvarez is employed by the commercial entity, Invitae (<https://invitae.com>). 3. Tables 1 and 2 are modified and adopted from a concurrent manuscript in BloodAdvances (accepted, in press). According to their journal rules, since we are the same authors for this work, we do not need to request specific permission to adopt and use those Tables herein.

Contributions: All authors contributed ideas for this manuscript. C.K. drafted the initial version. D.W., X.L., S.F., C.K., and D.E.P. submitted case details and other data for figures. D.W. and X.L. subsequently revised the manuscript, with further input from S.F., S.M., and L.A.G. All authors edited the final manuscript and revision. D.W. and L.A.G. supervised the project.
