Cryptic insertion of MYC exons 2 and 3 into the IGH locus detected by whole genome sequencing in a case of MYC-negative Burkitt lymphoma

Rabea Wagener, Susanne Bens, Umut H Toprak, Julian Seufert, Cristina López, Ingrid Scholz, Heidi Herbrueggen, Ilske Oschlies, Stephan Stilgenbauer, Matthias Schlesner, Wolfram Klapper, Birgit Burkhardt, and Reiner Siebert

Disclosures: none

Contributions: B.B., H.H. and W.K. provided tumor samples and clinical data. I.O. and W.K. performed IHC analysis. S.B. and C.L. performed cytogenetic analysis. S.S. performed IGHV sequence analysis. J.S., U.H.T., I.S. and M.S. analyzed the WGS data. R.W. analyzed the OncoScan data and interpreted the WGS data. R.S. designed the study and coordinated the project. R.W. and R.S. interpreted the data and wrote the manuscript. All authors read and approved the final manuscript.
