Version 4

DKC1 is a transcriptional target of GATA1 and drives upregulation of telomerase activity in normal human erythroblasts

Laura A Richards, Ashu Kumari, Kathy Knezevic, Julie Al Thoms, Georg von Jonquieres, Christine E Napier, Zara Ali, Rosemary O'Brien, Jonathon Marks-Bluth, Michelle F Maritz, Hilda A Pickett, Jonathan Morris, John E Pimanda, and Karen L MacKenzie

Disclosures: This project was funded by National Health and Medical Research Council (1007911, 510378, RG150480, RG170246), Cancer Council NSW (RG08-03), Cancer Institute NSW and the Anthony Rothe Memorial Fund. Prof Emery Bresnick from University of Wisconsin School of Medicine and Public Health provided the GATA1 antibody, and Prof Professor Inderjeet Dokal, Queen Mary University of London, provided the pCL10.1-DKC1 lentiviral vector employed in this study.

Contributions: Experimental work and analyses were performed by AK, LAR, KK, GvK, CEN, JAIT, ROB, JMB, MFM, ZA and HAP. ZA, JEP and KLM performed additional analyses. Development of research plan, research funding, supervision of research activities and intellectual input by KLM, JP and JM. The manuscript was written by KLM with input from AK, LAR, KK, GvK, HAP, ZA, JEP, and JAIT.
