Shear rate gradients promote a bi-phasic thrombus formation on weak adhesive proteins, such as fibrinogen in a VWF-dependent manner

Nicolas Receveur, Dmitry Nechipurenko, Yannick Knapp, Aleksandra Yakusheva, Eric Maurer, Cécile V. Denis, François Lanza, Mikhail Panteleev, Christian Gachet, and Pierre H. Mangin

Disclosures: The authors have no conflicts of interests to declare.

Contributions: P.H.M., D.N., M.P., Y.K. and N.R. designed the research; N.R. and E.M. performed in vitro and in vivo experiments; Y.K. performed microPIV experiments; A.Y. and D.N. performed all numerical studies. N.R. performed all imaging experiments; C.V.D. generated VWF<sup>-/-</sup> mice and the 701 antibody; P.H.M., D.N. and N.R. wrote the paper; C.G., M.P., F.L, and C.V.D. critically evaluated the manuscript.
