Version 3

Iron deficiency induced thrombocytosis increases thrombotic tendency
in rats

Kristine Jimenez, Florentina Leitner, Aran Leitner, Gisela Scharbert,
Philipp Schwabl, Anne-Margarethe Kramer, Anita Krnjic, Joachim
Friske, Thomas Helbich, Rayko Evstatiev, Vineeta Khare, and
Christoph Gasche

Disclosures: CG has received research support, lecturing or consulting honoraria from AOP Orphan Pharmaceuticals, Biogena Naturstoffe GmbH, Inshitra Inc., Shire Inc., and Vifor Int.

Contributions: K.J. designed and performed experiments, performed statistical analysis and wrote the manuscript. F.L. and A.L. contributed to experimental design, performed animal experiments and provided a critical review of the manuscript. G.S. performed PFA-100 and Multiplate aggregometry measurements, and provided a critical review of the manuscript. P.S. contributed to establishment of arterial thrombosis model and flow measurements, and provided a critical review of the manuscript. A-M.K. contributed to establishment of the venous thrombosis model and provided a critical review of the manuscript. A.K. assisted in experiments and provided a critical review of the experiment. J.F. and T.H. contributed to venous thrombosis imaging, and provided a critical review of the manuscript. R.E. conceptualized and designed experiments, evaluated statistical analysis, and provided a critical review of the manuscript. V.K. contributed to experimental design and editing and critical review of the manuscript. C.G. supervised study design, received funding, edited and provided a critical review of the manuscript.
