Version 4

Combinatorial efficacy of entospletinib and chemotherapy in
patient-derived xenograft models of infant acute lymphoblastic
leukemia

Joseph P. Loftus, Anella Yahiaoui, Patrick A. Brown, Lisa M.
Niswander, Asen Bagashev, Min Wang, Allyson Schauf, Stacey
Tannheimer, and Sarah K. Tasian

Disclosures: SUPPORT: 1. We acknowledge Dr Ann Forslund and Ms Chelsea Mullins formerly at Gilead Sciences for study protocol management and data analysis and Dr Emer Clarke at ReachBio Research Labs for assistance with experimental studies. We also thank Dr Christian Hurtz at the University of Pennsylvania for assistance with experimental studies and scientific discussion. These studies were supported by Gilead Sciences. Specimen banking for patients enrolled on the COG AALL0631 trial (NCT00557193) was supported by NIH/NCI U10CA180886 and U10CA098543. Infant and childhood ALL patient-derived xenograft model creation was also supported by the Gabrielle's Angel Foundation for Cancer Research Foundation, the Rally Foundation for Childhood Cancer Research, the SchylerStrong Foundation in memory of Schyler Anna Herman, the Simutis family childhood leukemia research fund in memory of Andrew David Simutis, and Team Nate and the Viands family childhood leukemia research fund in honor of Nathaniel J Viands. LMN was supported by NIH/NCI 5T32HD43021-15. SKT was supported by NIH/NCI K08CA184418 and 1U01CA232486 and Department of Defense Translational Team Science Award CA180683P1. DISCLOSURES: 2. AY, MW, AS, and ST are current or former employees of Gilead Sciences and have equity ownership in Gilead Sciences. SKT received research funding from Gilead Sciences. The remaining authors declare no relevant conflicts of interest. PATENT/COPYRIGHT: 3. No patent or copyright issues.

Contributions: JPL and AY designed and performed research, analysed data, and contributed to manuscript writing. PAB contributed vital new reagents and analysed and interpreted data. LMN, AB, MW, and AS performed research and analysed data. ST and SKT oversaw the study, designed research, analysed and interpreted data, and wrote the manuscript. SKT was responsible for revision of the manuscript. All authors approved the final version of the manuscript.
