Version 4

XPO1 regulates erythroid differentiation and is a new target for the treatment of β -thalassemia

Flavia Guillem, Michaël Dussiot, Elia Colin, Thunwarat Suriyun, Jean Benoit Arlet, Nicolas Goudin, Guillaume Marcion, Renaud Seigneuric, Sebastien Causse, Patrick Gonin, Marc Gastou, Marc Deloger, Julien Rossignol, Mathilde Lamarque, Zakia Bellaid Choucair, Emilie Fleur Gautier, Sarah Ducamp, Julie Vandekerckhove, Ivan C. Moura, Thiago T. Maciel, Carmen Garrido, Xiuli An, Patrick Mayeux, Narla Mohandas, Geneviève Courtois, and Olivier Hermine

Disclosures: none

Contributions: F.G. designed and performed the experiments, analyzed the data and wrote the manuscript. E.C. performed experiments of cell differentiation and Imagestream experiments. M.D. performed Imagestream experiments, analyzed the data and helped to write the manuscript. T.S performed western blot experiments. J-B.A. supervised the overall project, analyzed the data and helped to write the manuscript. N.G. helped to perform confocal microscopy acquisitions and analyses and helped to write the manuscript. G.M. and R.S. performed the BLI and helped to write the manuscript, S.C. helped to perform duolink experiments and to write the manuscript, P.G. and M.G. helped to analyze statistical data and to write the manuscript. J.R., M.L., Z.B.C, J.V, I.C.M, T.T.M, C.G., P.M., X.A. and N.M analyzed the data and helped to write the manuscript. G.C. performed experiments, supervised the overall project, analyzed the data and helped to write the manuscript. O.H. designed the study, supervised the overall project analyzed the data and wrote the manuscript. The authors declare no competing financial interests.
