HAEMATOL/2019/232314  
Version 3

Quantification of minimal disseminated disease by quantitative PCR  
and digital PCR for NPM-ALK as prognostic factor in children with  
anaplastic large cell lymphoma

Christine Damm-Welk, Nina Kutscher, Martin Zimmermann, Andishe  
Attarbaschi, Jutta Schieferstein, Fabian Knörr, Ilske Oshlies, Wolfram  
Klapper, and Wilhelm Woessmann

Disclosures: The NHL-BFM Registry 2012 is supported by the Deutsche  
Kinderkrebsstiftung. CDW, NK, JS and WW were additionally supported by  
Forschungshilfe Peiper. Pediatric lymphoma research of IO and WK is supported by the  
KinderKrebsInitiative Buchholz, Holm-Seppensen.

Contributions: CDW and WW designed and coordinated the analysis. NK, JS and CDW  
performed the experiments. IO and WK did reference pathology. WW, CDW, FK and AA  
collected samples. FK and MZ performed statistical analysis. CDW, NK and WW analyzed  
data. CDW and WW wrote the manuscript. All authors approved the final version of the  
manuscript.
